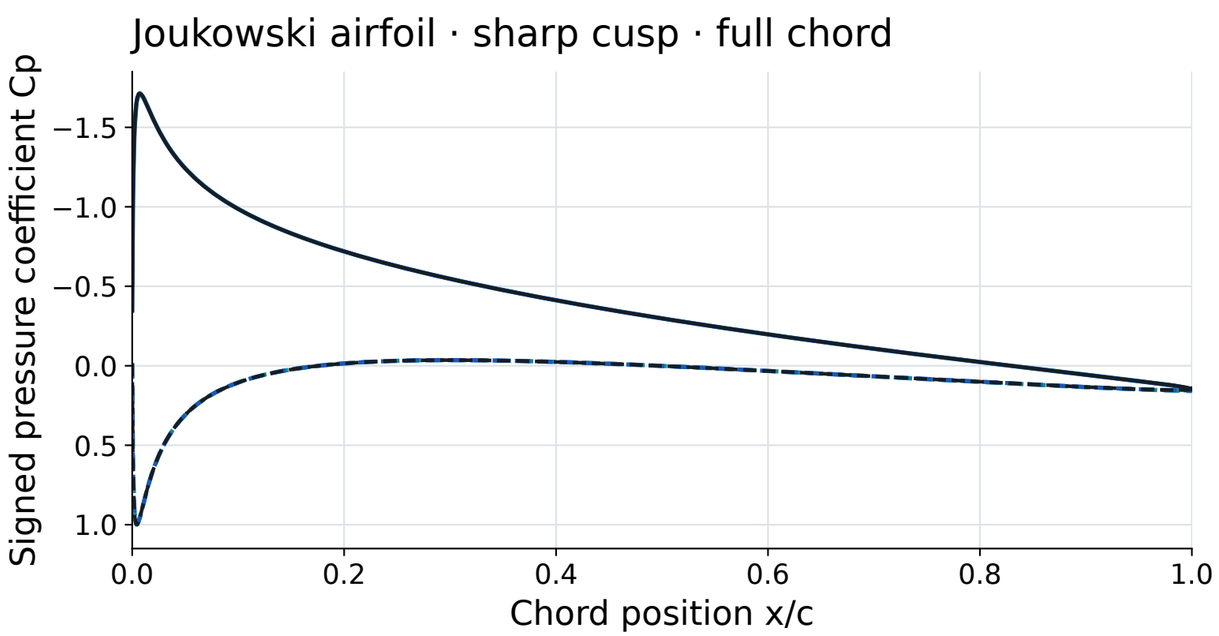
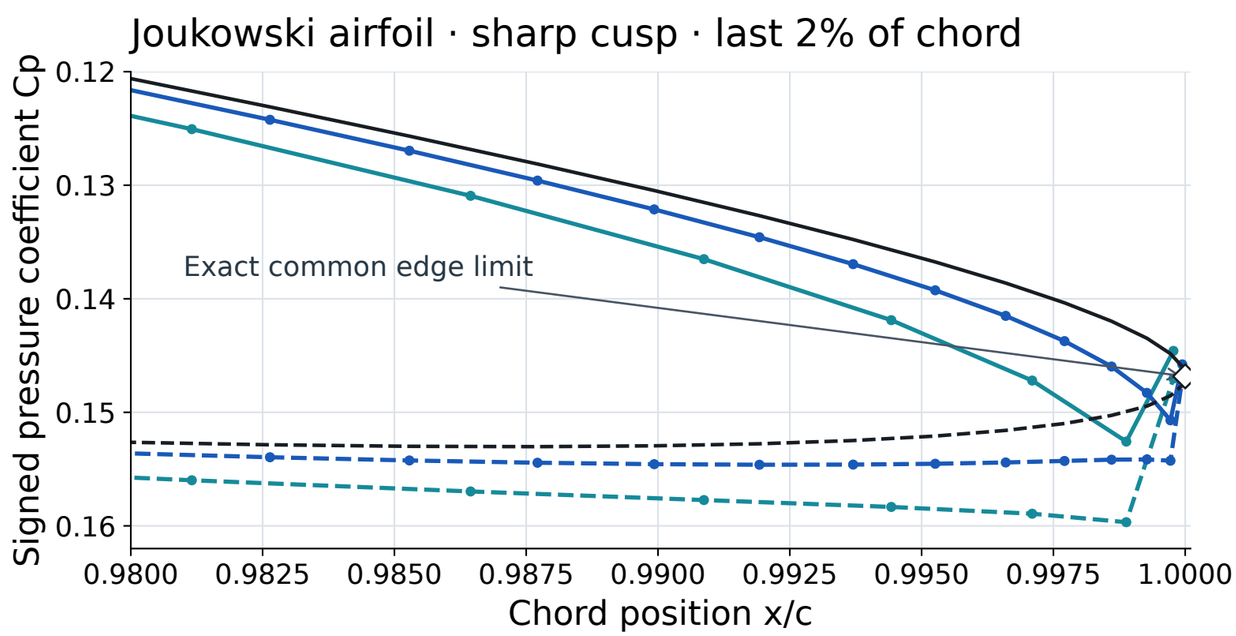
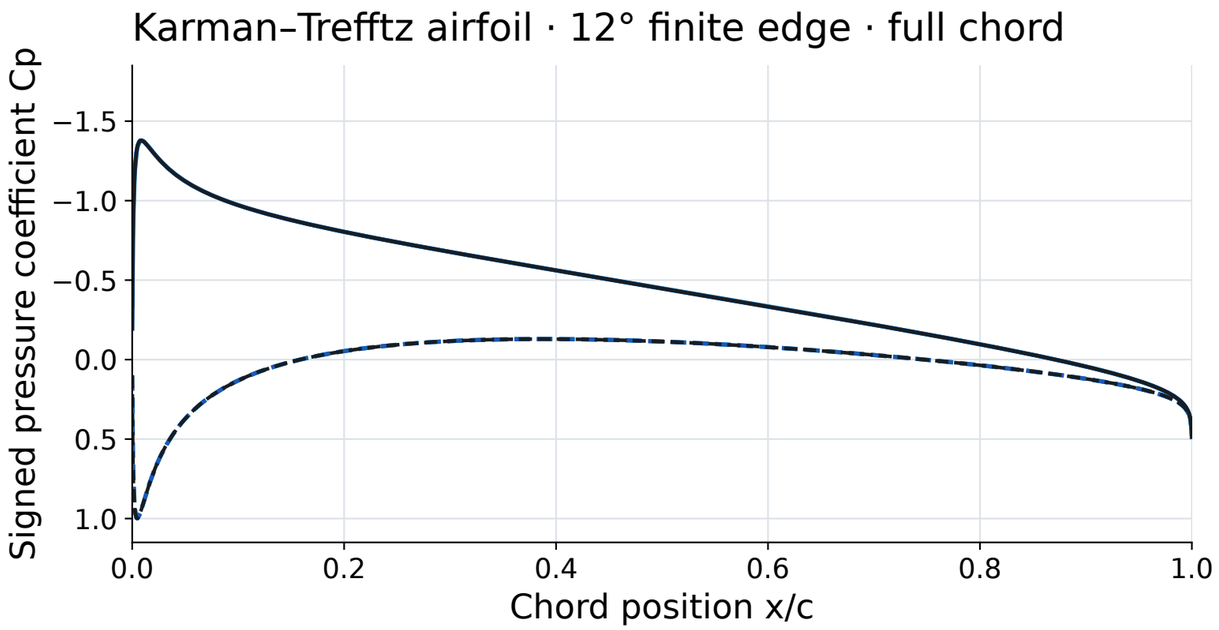
Independent 2D airfoil verification · α = 4°

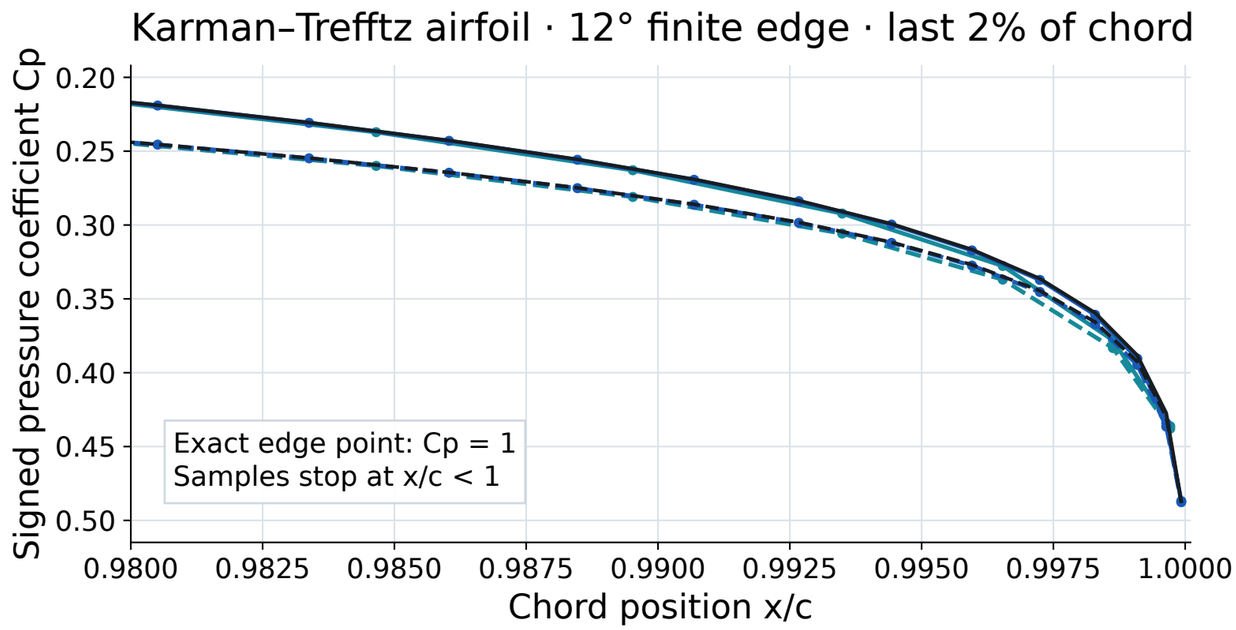
Every curve uses the same stated conformal airfoil and angle. Cp is compared at matching physical points.

Application · 160 contour panels
Application · 320 contour panels
Exact potential flow
Upper surface: solid
Lower surface: dashed









Dots are panel-centre predictions, not edge values. The near-edge bends are retained numerical errors, not physical shocks.

Sharp cusp: max |ΔCp| among the last 3 panels = 0.0100 (160) and 0.00587 (320). See the separate signed-error figure.
